Vumii Extends Range of Discoverii Platform

ATLANTA, August 10, 2007 - Vumii announces the addition of Discoverii 2000 and Discoverii 3000 to its day/night vision technology platform. Leveraging Vumii's innovative, dynamically controllable, continuous wave, invisible laser illumination technology, these two camera systems join Discoverii 1000 in providing the defense and security industries with surveillance recognition and identification capabilities in zero light for very long ranges. Discoverii 2000 automatically synchronizes illumination with an integrated continuous zoom (23mm -506mm) optics package, yielding human recognition at more than 1250 meters and human identification at 400 meters in complete darkness. Discoverii 3000 automatically synchronizes illumination with an integrated continuous zoom (25mm - 1500mm) optics package, yielding human recognition at more than 2500 meters and human identification at 1000 meters in complete darkness. Unlike thermal IR-based technologies, Discoverii technology produces natural contrast imagery, in which markings can be read and people recognized from zero light to full daylight, high magnification via continuous zoom, the ability to see through windows or windshields at night, high resolution court admissible video, minimal operator training, and low maintenance. "We have rapidly responded to the requests from our commercial and government customers to deliver even greater Discoverii range" said Randall Foster, Vumii's CEO. "These products are ideally suited for many perimeter applications, including military bases, national borders, oil, gas and chemical assets, airports, and seaports."

About Vumii

Vumii is a leading provider of sophisticated surveillance technologies that are revolutionary in practicality as well as performance. Vumii leverages expertise in electro-optics and image processing to develop advanced, affordable visualization and image interpretation tools that easily integrate with existing security systems. Vumii technologies greatly enhance prevention and response to critical physical security concerns, particularly for outdoor perimeter security in the transportation, critical infrastructure and government sectors. Current products include Discoverii, the first affordable long-range day/night vision camera system, and Sensorii, breakthrough situational awareness and image navigation software that dramatically improves orientation and usability for pan-tilt-zoom cameras.
